How to update Quiz Answers

It takes about five minutes. You do not need to install anything, and **your API key and settings stay exactly as they are**.

Keep this guide open next to Chrome, and do one step at a time. Every step has a picture of what you will see. Pictures marked **Example** are drawings, and your screen may look a little different, but the words and buttons are the same.

First: which version do you have?

1. In Chrome, click the address bar at the top, type `chrome://extensions` and press **Enter** (**Return** on a Mac).
2. Find the **Quiz Answers** box. The number next to the name is your version.

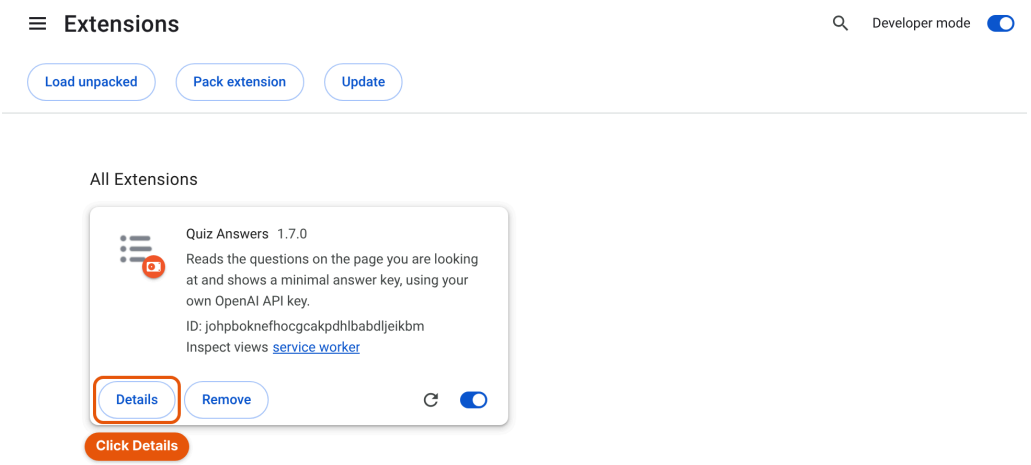

What does yours say?

- **1.8.0 or higher** → skip to The easy way. It is a double-click.
- **Lower than 1.8.0** (for example 1.7.0 or 1.5.1) → do The one-time update just below. You only ever do this once. After it, you can use the easy way.

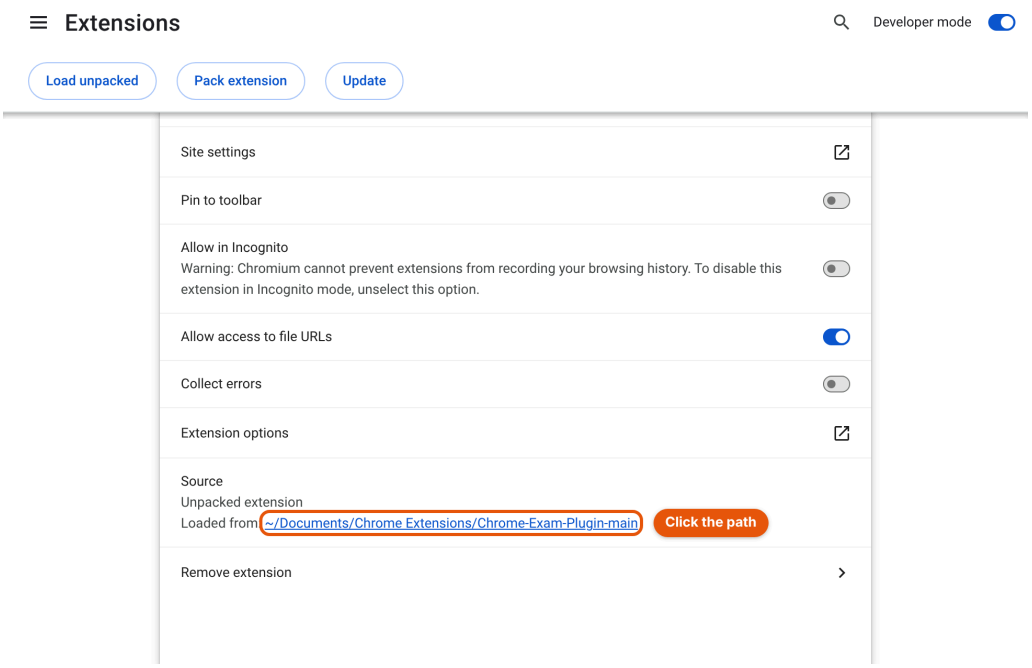

The one-time update (versions below 1.8.0)

Step 1. Open the folder Chrome uses

1. On the Quiz Answers box, click **Details**.

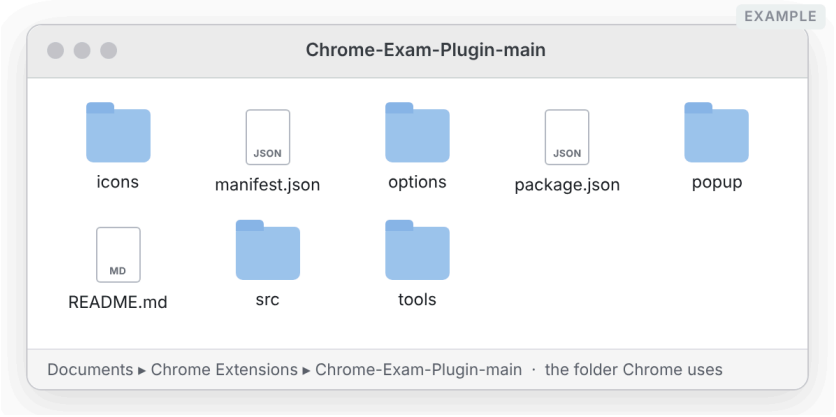

2. Scroll down to **Source**. Next to **Loaded from** is the folder's location. **Click it.** (On Windows it starts with `~\` instead of `~/`.)

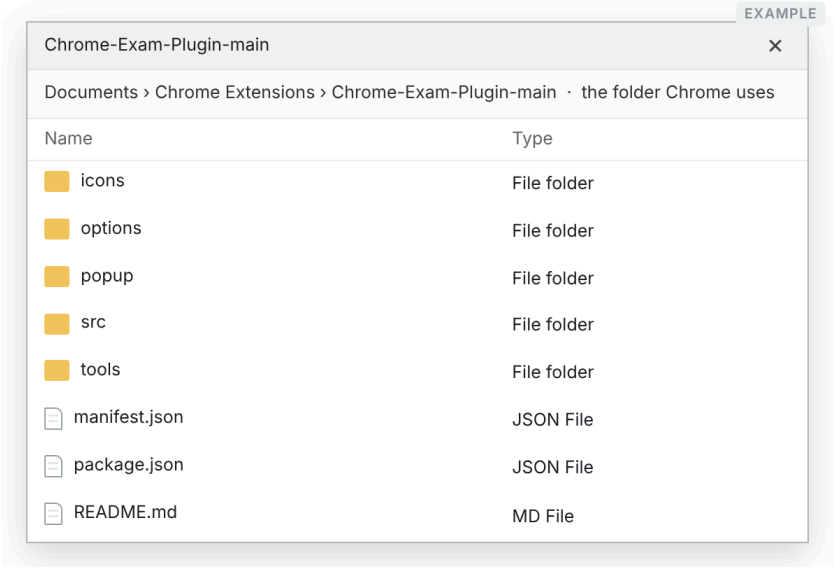

3. A folder window opens. This is the extension's folder, and it is the only one that

matters. **Leave this window open.**

On a Mac:

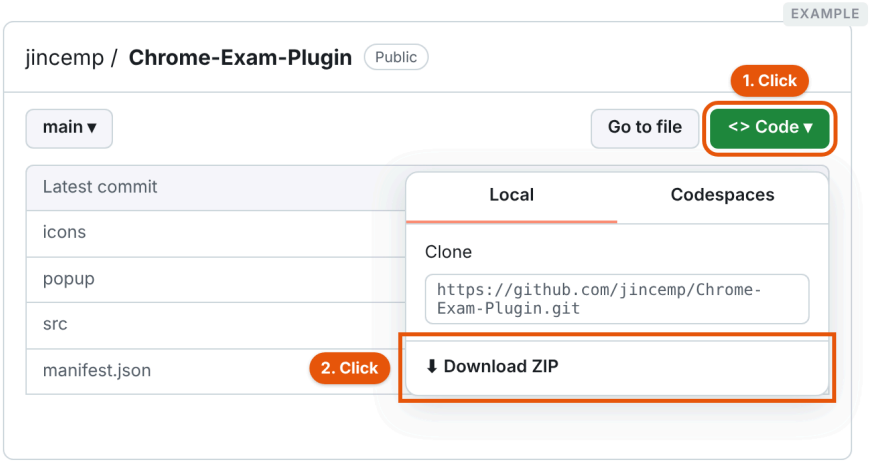

On Windows:

Step 2. Download the new version

1. Open this page: **https://github.com/jincemp/Chrome-Exam-Plugin**
2. Click the green **Code** button, then click **Download ZIP**.

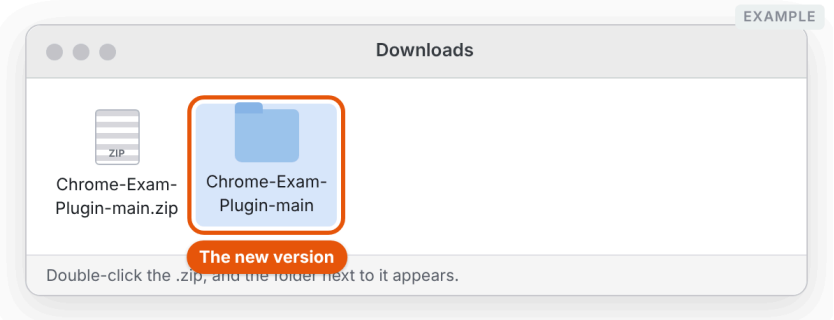

A file called `Chrome-Exam-Plugin-main.zip` goes into your **Downloads** folder. (If you have downloaded it before, the new one may be called `Chrome-Exam-Plugin-main (1).zip`. Use the newest one.)

Step 3. Unzip it

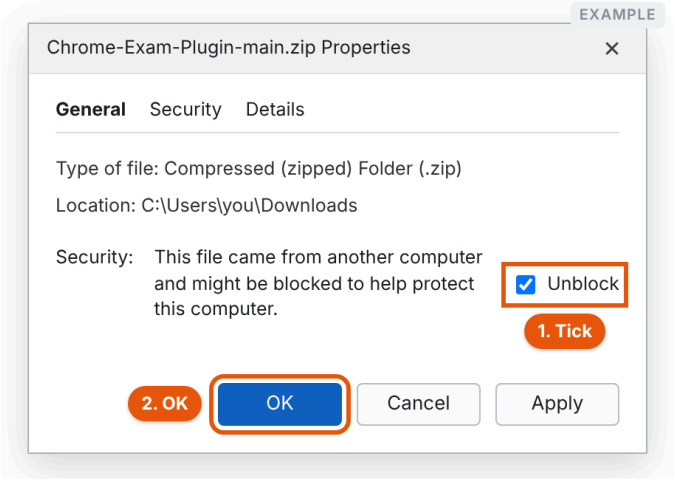

On a Mac:

Open your **Downloads** folder and double-click `Chrome-Exam-Plugin-main.zip`. A folder with the same name appears next to it. **Double-click that folder to open it.**

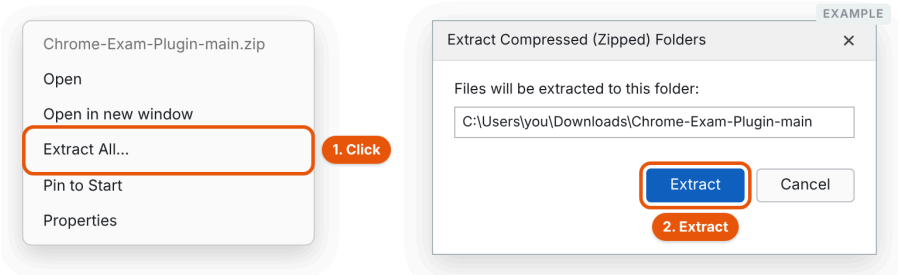

On Windows:

1. In **Downloads**, right-click `Chrome-Exam-Plugin-main.zip` and choose **Properties**. At the bottom, tick **Unblock**, then click **OK**. (No Unblock box? Just skip this.)

2. Right-click the zip again and choose **Extract All...**, then click **Extract**.

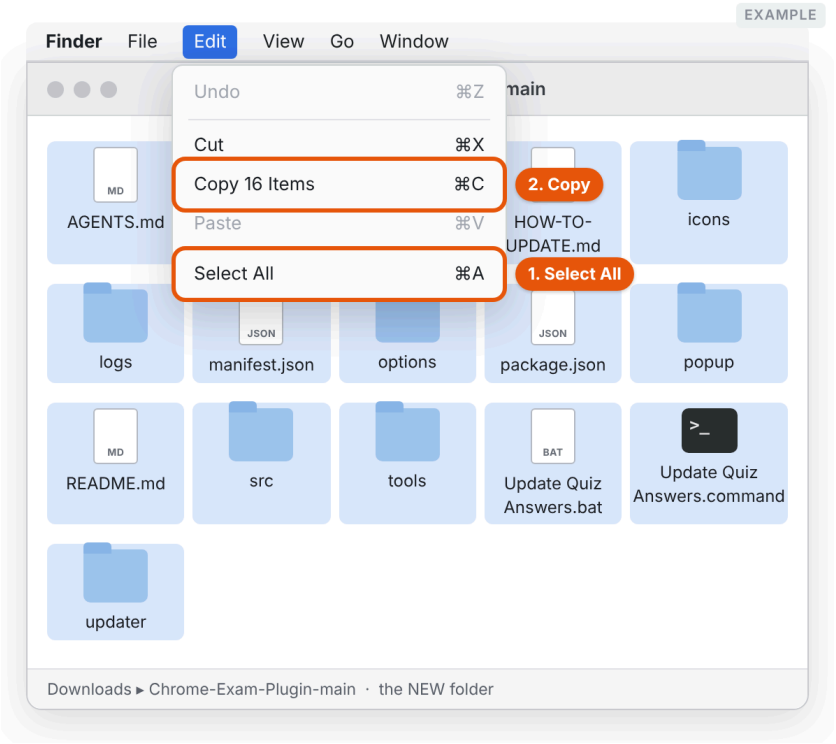

3. A new folder opens. If you see another folder called `Chrome-Exam-Plugin-main` inside it, open that one too. Stop when you can see `manifest.json`.

> **Check:** you now have **two** folder windows open: the **old** one from Step 1, and this **new** one. Both contain `manifest.json`. The new one is in **Downloads**. (If your old folder is in Downloads too, the new one is called `Chrome-Exam-Plugin-main 2`.)

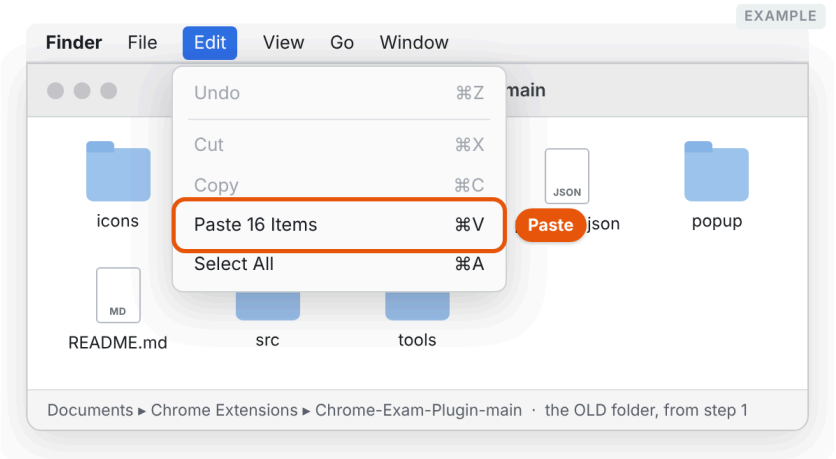

Step 4. Copy the new files into the old folder

On a Mac:

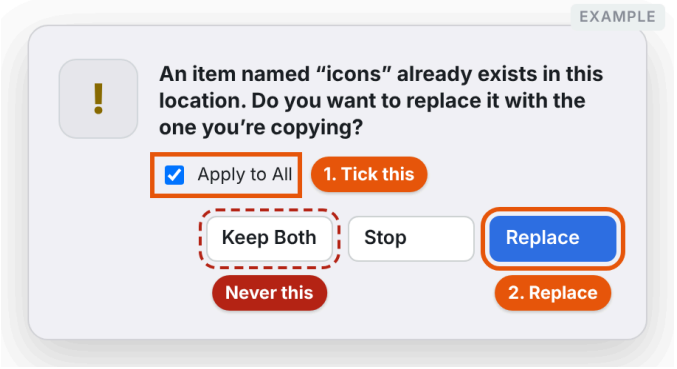

1. Click an empty spot inside the **new** folder window. In the menu bar at the very top of the screen, click **Edit → Select All**, then **Edit → Copy**. (Or press ⌘ A, then ⌘ C.)

2. Click an empty spot inside the **old** folder window, the one from Step 1. Click **Edit → Paste**. (Or press ⌘ V.)

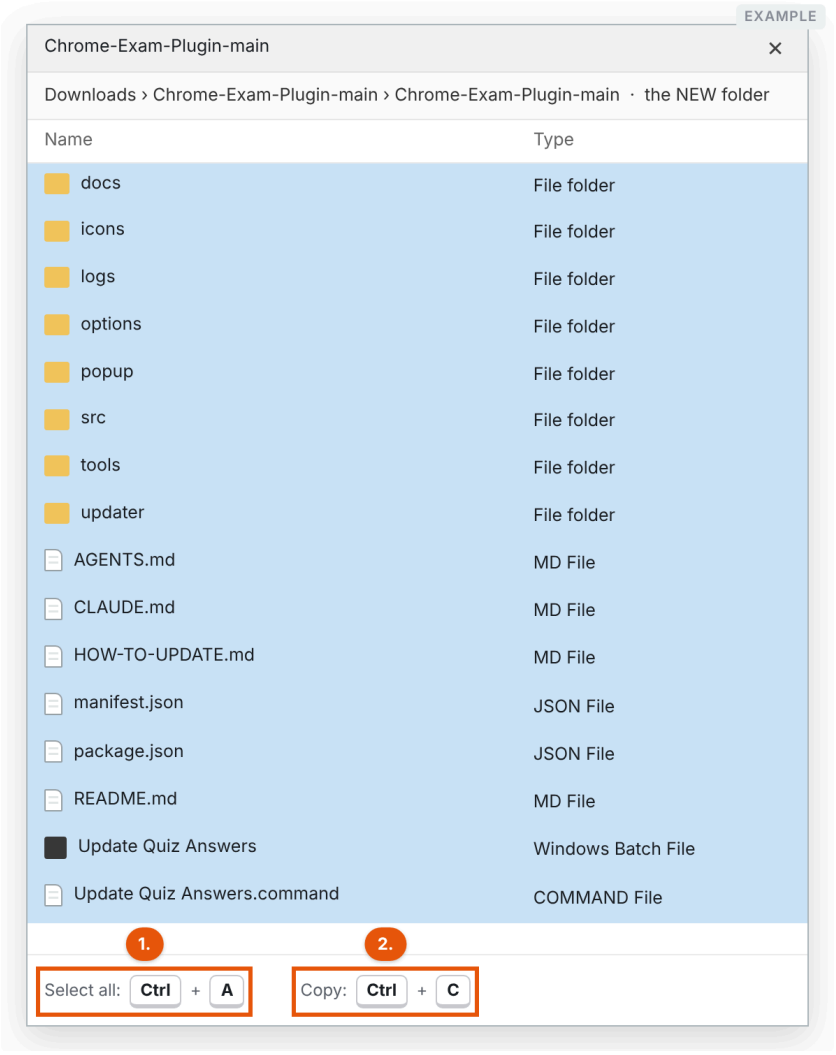

3. A question appears. **Tick "Apply to All"**, then click **Replace**.

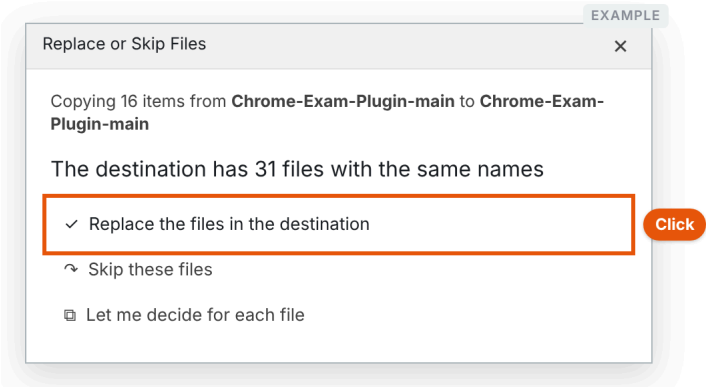

> ⚠️ **Never click "Keep Both".** It leaves the old version in place, and nothing gets updated. If you clicked it by mistake, see Something went wrong?.

On Windows:

1. Click an empty spot inside the **new** folder window. Press `Ctrl`+`A` (this selects everything), then `Ctrl`+`C` (this copies it).

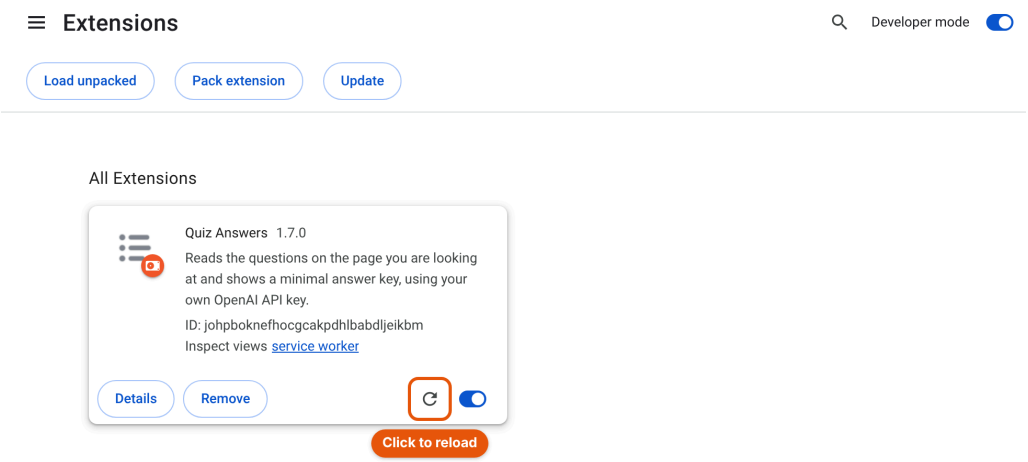

2. Click an empty spot inside the **old** folder window, the one from Step 1. Press `Ctrl` + `V`.
3. A question appears. Click **Replace the files in the destination**.

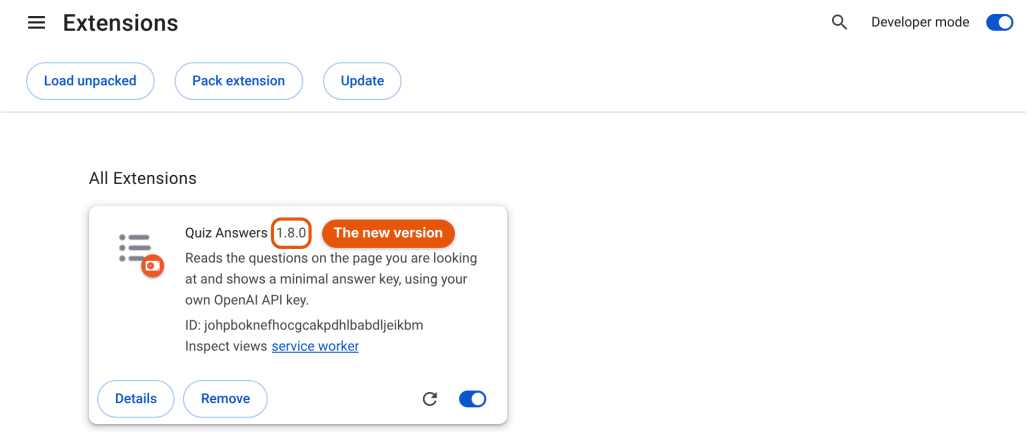

Step 5. Tell Chrome

1. Go back to the `chrome://extensions` tab in Chrome.
2. On the Quiz Answers box, click the **round arrow**.

3. The number next to the name changes to the new version: **1.8.0 or higher**.

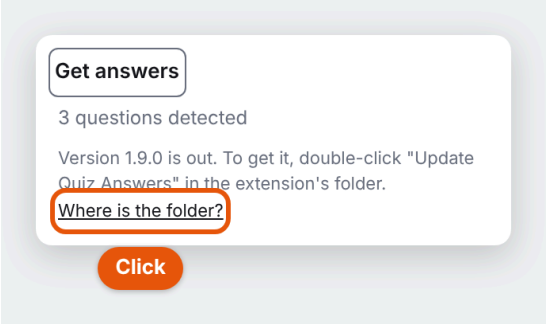

✅ **Done!** Your API key and settings are all still there. From now on, use the easy way to update. The number did not change? See Something went wrong?.

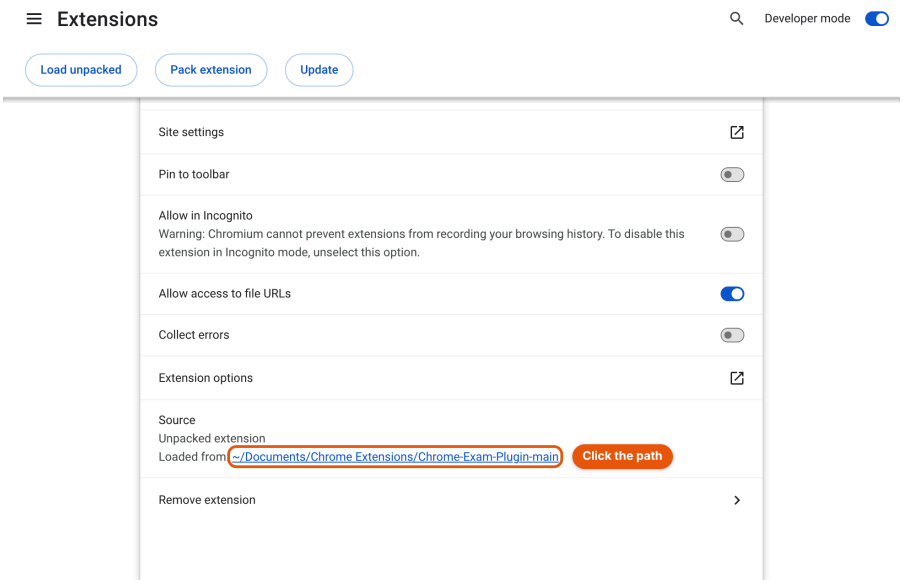

The easy way (version 1.8.0 or higher)

Step 1. See that there is an update, and open the folder

1. Click the Quiz Answers icon in Chrome's toolbar. When a new version is out, the bottom of the box tells you so. Click **Where is the folder?**

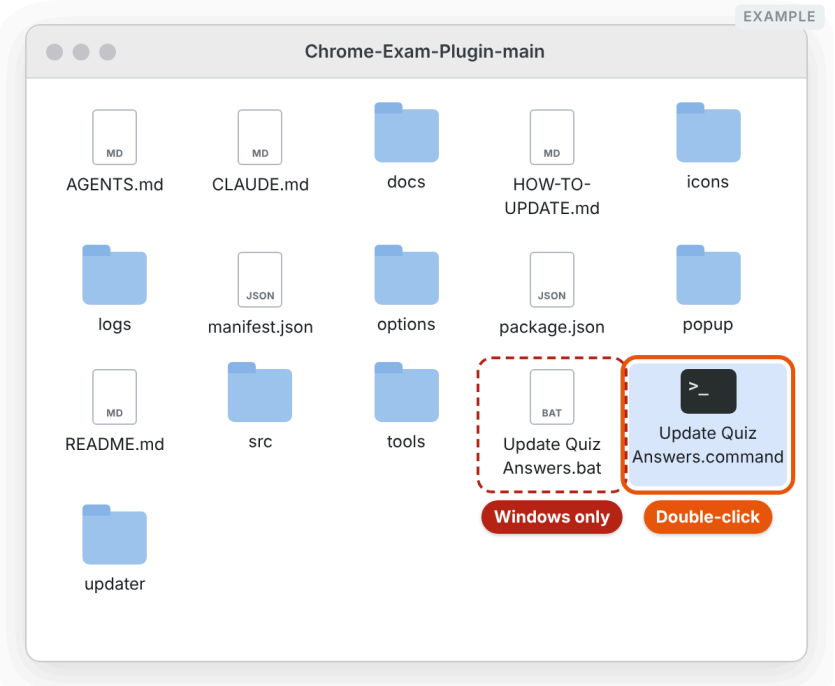

2. Chrome opens the extension's Details page. Scroll down and click the folder path next to **Loaded from**, just as in this picture:

   The extension's folder opens.

Step 2. Double-click the updater

On a Mac, double-click **Update Quiz Answers.command**. (The one ending in `.bat` is for Windows.)

On Windows, there are two files with nearly the same name. Double-click the one whose **Type** says **Windows Batch File**.

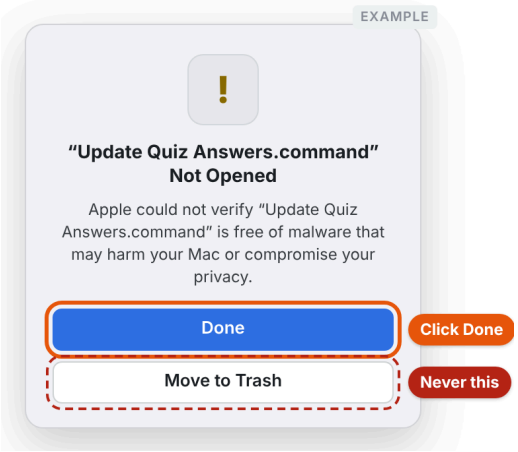

Step 3. The first time only: let it run

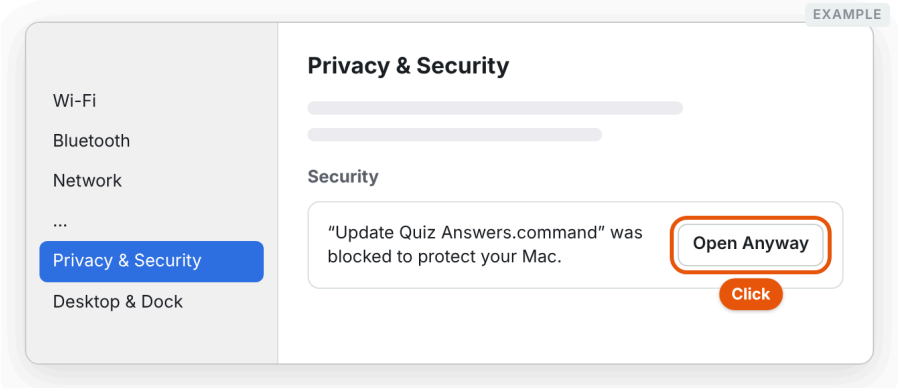

Your computer checks with you once, because the file came from the internet. After that, it just runs.

On a Mac with macOS 15 (Sequoia) or newer:

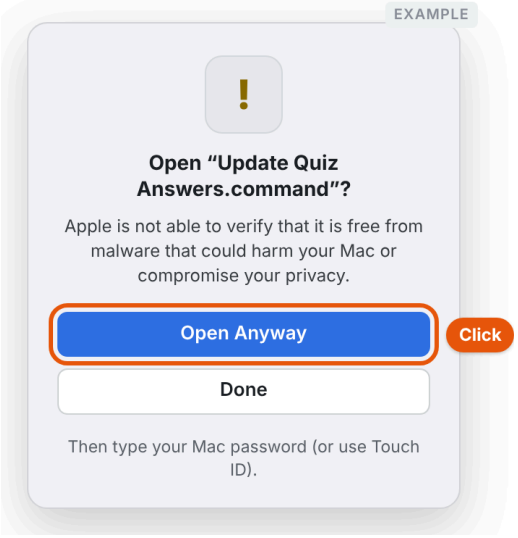

1. A box says the file was **Not Opened**. Click **Done**, never Move to Trash.

2. Click the Apple menu (the apple at the very top left of the screen), then **System Settings**, then **Privacy & Security**. Scroll down to **Security** and click **Open Anyway**.

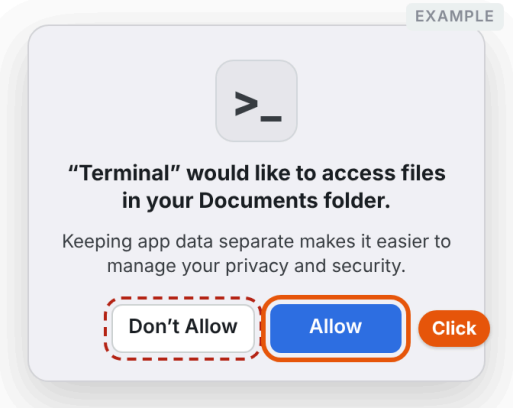

3. Click **Open Anyway** once more, then type your Mac password (or use Touch ID).

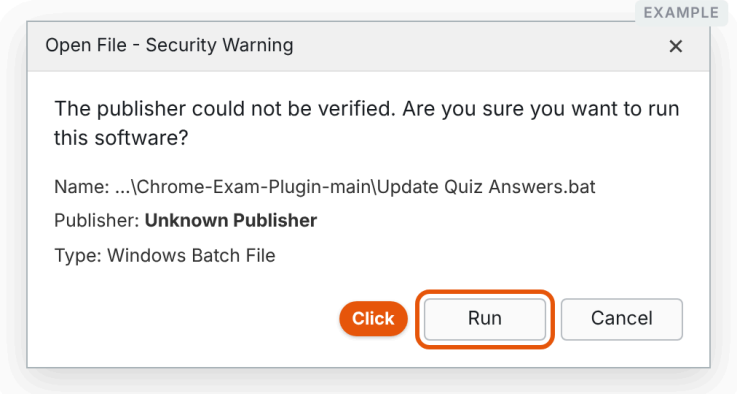

No Open Anyway button? It only stays for about an hour. Double-click the file again, click Done, and come straight back here.

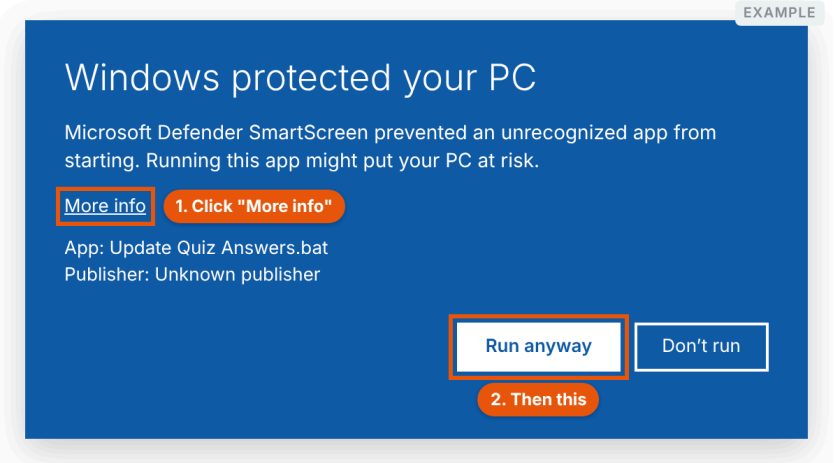

On a Mac with macOS 14 (Sonoma) or older: right-click (or Control-click) the file, choose **Open**, then click **Open** again.

On any Mac: if you are asked whether "Terminal" may access a folder, click **Allow**.

On Windows, you may see one of these. Click the button shown.

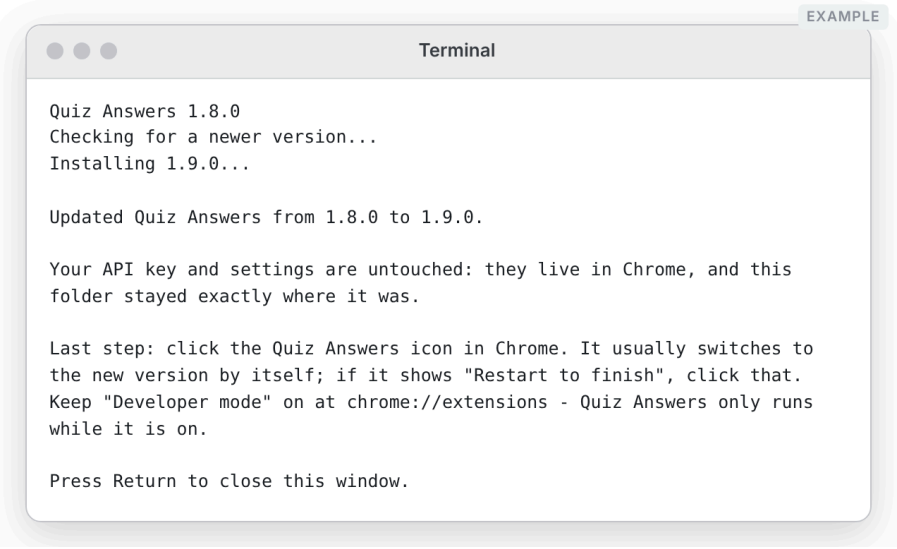

Does it say the file was **blocked**, with no button to run it? Close that message. Right-click **Update Quiz Answers**, choose **Properties**, tick **Unblock** at the bottom, click **OK**, and double-click it again.

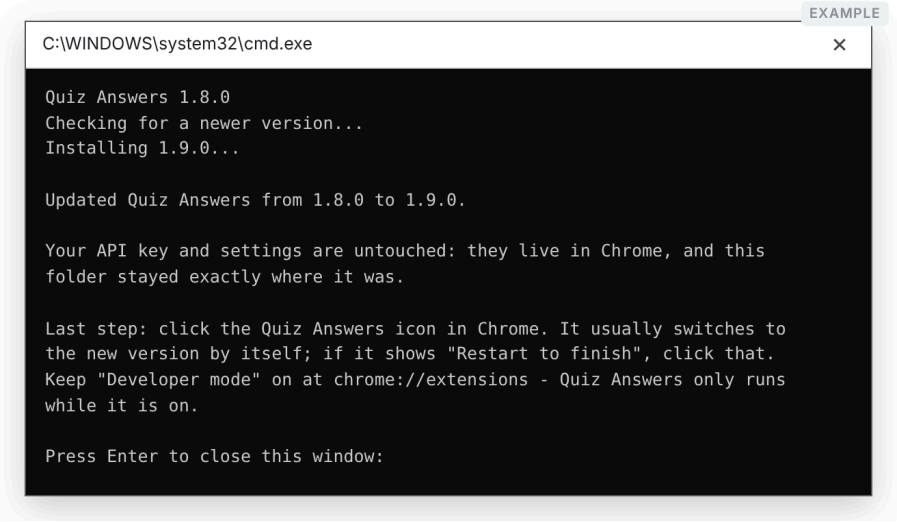

Step 4. Let it finish

A window shows the progress. It takes a few seconds. When it says **"Updated Quiz Answers from ... to ..."**, press **Return** (Mac) or **Enter** (Windows) to close it.

On a Mac:

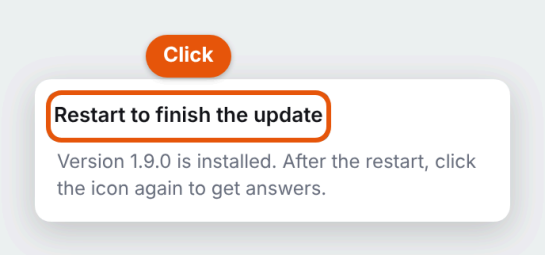

On Windows:

Step 5. Finish in Chrome

Click the Quiz Answers icon. If the button says **Restart to finish the update**, click it. Then click the icon again.

✅ **Done!** (Is the button just **Get answers**? Then it has already switched over by itself, and there is nothing more to do.)

Something went wrong?

The version number did not change after the one-time update. The new files went into a different folder. Go back to Step 1 and use the window that opens when you click **Loaded from**. That is the folder to paste into.

I clicked "Keep Both" by mistake. Nothing is broken. Do Step 4 again, and this time click **Replace**. Afterwards you may see extra items ending in "copy" or "2" in the old folder. You can leave them.

Chrome now shows two Quiz Answers boxes. Click **Details** on each. Keep the one whose **Loaded from** is the folder you updated. Switch the other one off with the switch at its bottom right.

It is asking for my API key again. Chrome is loading a different folder than before. That happens if the folder was moved or renamed. Paste your key in again, and everything else carries on as normal.

Mac: "could not be executed because you do not have appropriate access privileges". Open **Terminal** (press `⌘`+`Space`, type *Terminal*, press Return). Type `bash` and a space, drag **Update Quiz Answers.command** into the Terminal window, and press Return. After one run like this, double-clicking works again.

Mac: "Operation not permitted". Open the Apple menu → **System Settings** → **Privacy & Security** → **Files & Folders** → **Terminal**, and switch on the folder Quiz Answers is in (Documents, Desktop or Downloads). Then double-click the updater again.

Windows: the window flashes and closes, or says scripts are disabled or "restricted". That PC does not allow scripts. Use the one-time update steps instead. They work for every version.

Quiz Answers stopped working, and its box says "Turn on developer mode". At the top right of `chrome://extensions`, switch **Developer mode** on. It needs to stay on.

Good to know

- Your API key is kept inside Chrome, not in the folder, so updating never touches it.
- Never move or rename the extension's folder. Chrome finds Quiz Answers by where that folder is.
- Keep **Developer mode** switched on at `chrome://extensions`.
